Documentation

Test

POST `{{base}}/api/integration/verify/confirm`

Confirms an OTP (One-Time Password) sent to the user’s email address as part of the integration verification flow. On success, the response includes a `report_view_token` which is automatically saved to the `integration_report_view_token` environment variable for use in subsequent requests.

Request Body

Field	Type	Required	Description
email	string	Yes	The email address associated with the integration account.
otp	string	Yes	The one-time password received via email.

Example Request Body

```
{
  "email": "user@example.com",
  "otp": "000000"
}
```

Response

On success, the response contains a `report_view_token` which grants access to report viewing functionality.

Post-response Script

The `report_view_token` from the response is automatically stored in the `integration_report_view_token` environment variable.

Examples

- **Verify - Confirm OTP - Success** — Successful OTP confirmation with a valid token in the response.
- **Verify - Confirm OTP - Error** — Failed OTP confirmation (e.g. invalid or expired OTP).

AUTHORIZATION

 **Bearer token** Authorization: Bearer `{{integration_token}}`
