API DOCUMENTATION

Let citizens file and track complaints and reports: submit a complaint, verify by OTP, then list and view report status by case number.

Variables

Verify - Request OTP

Documentation

Test

POST `{{base}}/api/integration/verify/request`

Initiates an OTP (One-Time Password) verification flow by sending an OTP to the specified email address. This is the first step in the email verification process.

Request Body

Field	Type	Required	Description
email	string	Yes	The email address to which the OTP will be sent.

Example Request Body

```
{
  "email": "user@example.com"
}
```

Responses

Success

A successful response indicates that the OTP has been dispatched to the provided email address. The client should prompt the user to enter the OTP they received.

Error

An error response is returned when the request is invalid — for example, if the email address is missing, malformed, or not associated with a valid account.

Notes

- The `email` field supports Postman’s dynamic variable `juan.delacruz@example.com` for testing purposes.
- Authentication via `integration_token` is required. Ensure the `integration_token` environment variable is set before sending this request.
- The base URL is configured via the `{{base}}` environment variable.

AUTHORIZATION

 **Bearer token** Authorization: Bearer `{{integration_token}}`

BODY · RAW

Request body 

```
{
  "email": "juan.delacruz@email.com"
}
```

```
}
```

EXAMPLE REQUEST

cURL

```
curl --request POST \  
  --url '{{base}}/api/integration/verify/request' \  
  --header 'Authorization: Bearer {{integration_token}}' \  
  --header 'Content-Type: application/json' \  
  --data '{  
    "email": "juan.delacruz@email.com"  
  }'
```

EXAMPLE RESPONSES

200 Verify - Request OTP - Succ...

401 Verify - Request OTP - Error

Response body · 200 OK

```
{  
  "code": 200,  
  "already_verified": false,  
  "message": "A 6-digit verification code has been sent to juan.delacruz@email.com. It expires  
in 5 minutes."  
}
```
